Towai Technologies' Fuel Additive Applicators

We have installed Towai Technologies' Maxi twenty litre and Mini five litre Applicators on a range of sites and different applications. These include:

- Trucks,
- Harbour ferries, and
- Fuel tankers.

The truck installations are Towai's Automatic Mini Applicator, which have now been operating for over six months with no problems and the company has commenced a roll out.

The harbour ferry company has been conducting trials on two engines for three months using Towai's Keypad Display Unit Mini Applicator. To date they have used over 40,000 litres of fuel during the trial. The Applicator has performed perfectly.

The exciting installations have been four fuel tankers dosing directly into the fuel flow during their fuel deliveries. This is selectable for individual customers with some deliveries being dosed and some not dosed.

The tankers have two different sized fuel delivery hoses which deliver fuel at different pressures and flow rates. From initially only being able to dose one size fuel hose, Towai undertook further developments so that both size hoses can now be used with automatic selection and no input required from the operator.

To date they have dosed over 500,000 litres of fuel perfectly.

We are most impressed with Towai's products, commitment and expertise, and Ron Longley's willingness to assist and work with us to ensure a successful outcome for all parties.

We have no hesitation in recommending Ron and Towai Technologies' products.

Yours faithfully

Peter McGregor
